IMPROVING PRODUCTIVITY

INTRODUCTION

- **Advantage Consulting** has implemented cost reduction programs and developed standards for material handling and all types of distribution and manufacturing operations.
- Each **Advantage Consulting** engineer has at least twenty years of Industrial Engineering experience.
- Out client list includes: Amerisource, Bookspan, Meijers, White Rose, Wakefern, Revlon and many others.

OBJECTIVES

- **Advantage Consulting** will provide solutions that best utilize all of our customer's resources.
- **Advantage Consulting** will recognize and respond to the unique needs and problems of our customers.
- **Advantage Consulting** will commit to a long-term relationship with our customers. Providing quality service and working in cooperation with our clients.

INDUSTRIAL ENGINEERING

Advantage Consulting engineers develop performance standards using time studies or pre-determined standards.

These standards are applied through software either using the clients existing mainframe or using a stand alone PC or server.

The standards are calculated applying constants such as, get order and get pallet, and variables such as time per case and distance. The variables take into account items such as case size and travel distance.

Advantage uses a similar approach for fork lifts. Taking into account travel and pallet handling.

PERFORMANCE SOFTWARE

Advantage Consulting has developed a proprietary computer program that calculates a standard time for each individual operation and calculates the employee's performance based on the standard.

The program also allows the customer several methods for reporting this information: by individual employee, shift, or entire staff; and can be reported by the day or week.

Advantage Consulting's software package can be modified to accept incoming data streams that conform to the specifications of the customers IT department.

Advantage Consulting has also developed a tracking program that can be used in place of an RF system to accurately log in each assignment and give real-time performance data to the employee.
